

## University of International Business and Economics International Summer School

### MAT210 Linear Algebra

**Term: June 15 - July 16, 2020**

**Instructor: Sema Salur**

**Home Institution: University of Rochester**

**Email: semasalur@gmail.com**

**Class Hours: Monday through Thursday, 120 minutes each day (2,400 minutes in total)**

**Office Hours: TBD**

**Total Contact Hours: 64 contact hours (45 minutes each, 48 hours in total)**

**Location: WEB**

**Credit: 4 units**

#### **Course Description:**

In the course, the student will gain a familiarity with the theory of linear algebra and its applications. At the same time, more broadly, the student will be introduced to pure (i.e., theoretical) mathematics. That is: the student will increase his/her ability to absorb effectively abstract theory, to read and write mathematically rigorous argument, to extrapolate from fundamental principles, and to attempt creative answers to unfamiliar problems. The student will develop an intuition for theoretical constructs and familiarity with the mathematical style of rigorous argument with which to substantiate that intuition; as well as practice the patience needed to deal with sophisticated mathematical concepts.

#### **Course Goals:**

Students who satisfactorily complete this course will:

1. Be familiar with the statements and meanings of the definitions of the fundamental concepts of linear algebra, e.g., vector space, null space, linear independence, basis, dimension, linear transformation, one-to-one, onto, kernel, eigenvector, eigenvalue, orthogonal complement, diagonalizability, etc.
2. Have facility with basic calculational skills, e.g., Gaussian elimination; calculating the determinant, row space, null space, etc. of a matrix; conversion of coordinate vectors between bases; finding the matrix representation of a linear transformation with respect to given bases; determining the eigenspaces of a matrix; etc.
3. Be able to justify, with mathematical rigor, the fundamental theoretical statements of linear algebra (e.g., the fact that a matrix is invertible if and only if its determinant is nonzero; the Rank Theorem; etc.).
4. Have developed the ability to rigorously write mathematical arguments to justify (possibly previously unseen) claims based on their expanding theoretical knowledge.

### Required Textbook:

Leon, Steven. Linear Algebra with Applications, 8th edition

### Grading Policy:

There will be daily quizzes, three midterms and one final exam. All exams will be closed-book. No notes, calculators, or other electronic devices will be allowed, and having such a device in view during the exam is an academic honesty violation.

### Grading Scale:

The course grades will be calculated based on the following percentages:

- Homework: 30%
- Midterm: 30%
- Final Exam: 40%

Assignments and examinations will be graded according to the following grade scale:

|           |        |           |          |
|-----------|--------|-----------|----------|
| <b>A</b>  | 90-100 | <b>C+</b> | 72-74    |
| <b>A-</b> | 85-89  | <b>C</b>  | 68-71    |
| <b>B+</b> | 82-84  | <b>C-</b> | 64-67    |
| <b>B</b>  | 78-81  | <b>D</b>  | 60-63    |
| <b>B-</b> | 75-77  | <b>F</b>  | below 60 |

### Class Rules:

All academic work should be done with the high level of honesty and integrity. Academic misconduct of any kind may result in a grade penalty or the assignment of a failing grade.

### Course Schedule:

#### Week 1

#### Assignment

Section 1.1: Systems of Linear Equations

Supplementary Problems: 6gh, 8, 9, 10, 11

Section 1.2: Row Echelon Form

Supplementary Problems: 5dkl, 6, 7, 8, 17

Section 1.3: Matrix Arithmetic

Supplementary Problems: 6, 7, 13a, 15, 17

Section 1.4: Matrix Algebra

Supplementary Problems: 3, 7, 12, 20, 21, 26, 29

Section 1.5: Elementary Matrices

Supplementary Problems: 8a, 10c, g, 15, 17, 18, 24, 27

Section 2.1: Matrix Determinant

Supplementary Problems: 1, 3dg, 6, 8 (use proof by induction), 10

## Week 2

### Assignment

Exam 1: Date TBD

Section 2.2: Properties of Determinants

Supplementary Problems: 3df, 5, 6, 12, 14, \*15, 16

Section 2.3: Matrix Adjoint

Supplementary Problems: 1bd, 6, 10, \*12

Section 3.1: Vector Spaces

Supplementary Problems: 6, 8, 10, 15

Section 3.2: Subspaces

Supplementary Problems: 5, 8, 13, 17, 19, 20

Section 3.3: Linear Independence

Supplementary Problems: 2b, 5b, 6, 15, 16, 20

Section 3.4: Basis and Dimension

Supplementary Problems: 10, 13, 17, 19

## Week 3

### Assignment

Exam 2: Date TBD

Section 3.5: Change of Basis

Supplementary Problems: 2, 3, 4, 6, 7, 9, 10

Section 3.6: Row Space and Column Space

Supplementary Problems: 1, 3, 4ef, 8, 10, 14, 17, 19, 24, 26

Section 4.1: Linear Transformations

Supplementary Problems: 1, 3, 7, 8, 9ab, 12, 13, 14, 16, 19, 21, 22

Section 4.2: Matrix Representations of Linear Transformations

Supplementary Problems: 3, 5, 6, 7, 9, 14, 16, 17, 18b, 20

## Week 4

### Assignment

Exam 3: Date TBD

Section 4.3: Similarity

Supplementary Problems: 2, 3, 6, 8, 9, 11, 12, 14, 15a\*, 15b

Section 5.1: Scalar Product

Supplementary Problems: 3ab, 15

Section 5.2: Orthogonal Subspaces

Supplementary Problems: 1bc, 6, 7, 8, 14, 15, 17

Section 15.3: Method of Least Squares

Supplementary Problems: 1c, 2, 9, 11, 14

Section 5.4: Inner Product Spaces

Supplementary Problems: 3, 4ab, 7ab, 10, 11

## Week 5

### Assignment

Section 5.4: Inner Product Spaces, Part II

Supplementary Problems: \*9, 12, 13, 15, 16, 21, 22, \*33

Section 5.5: Orthonormal Sets

Supplementary Problems: 2, 5, 6, 8, 12, 15, \*20, \*36

Section 6.1: Eigenvalues and Eigenvectors

Supplementary Problems: 1acf, 2, 3, 6, 9, 12, 21, \*32

Section 6.3: Diagonalization

Supplementary Problems: 1ace, 3, 6

Final Exam

### General Comments:

1. In order to train your minds in mathematical thinking, much of lecture will consist of the “Socratic Method” of questioning. Even if silently, do try to puzzle out the answers. An analogy: the lecture should be a “mental exercise” class. Knowledge cannot be given: it must be stolen. Engage your mind.
2. Many problems will not be solvable at first (or second) viewing. Be patient: clarify any unknown concepts, try to reduce the problem, brainstorm to unearth possibly relevant concepts, and follow your intuition. It may help to, after a period of hard work, put the problem away. Do not worry if you cannot do every problem: what is important is that you try.
3. If you find yourself getting lost in the material, appoint the office hours with me immediately! It is much easier to lead a student’s mind individually rather than in a group.
4. Note that we may not dot every i or cross every t during class: you are responsible for reading the text. In particular, it is to your advantage to read the material before class; in this way the student becomes an active participant rather than a passive recipient.
5. Tests will check your understanding of the lectures as well as cover homework-type problems; it will benefit you to check after each lecture to see if you’ve understood the line of the arguments.

Precise knowledge of the theory is vital!
